

Balloon Care

- Be mindful balloons are delicate. You will need to come with enough space in your vehicle for what you are collecting (seats down etc) please don't 'squeeze' them behind seats/boot as they may damage
- Once collected the balloon is your responsibility, please also check spelling on all personalisation before leaving with your balloon
- The float time of all helium balloons varies depending on the type of balloon please send us a message for more information
- Keep balloons away from sharp objects as the balloons could burst & also away from radiators as the heat can affect them
- Don't leave the balloons in your vehicle for any longer than needed (just for transportation)
- Please ensure you remove balloons from delivery bags as soon as you have transported them
- Balloons will shrink in the cold and expand in the heat, please bear this in mind throughout the seasons
- If your event is outdoors please note the balloons will oxidise in heat / sunlight
